RE: Test results for home in Miami

Dear Bill:

Enclosed please find 3 compressive test results, of cores taken from a new home in Miami Florida, drilled and tested by Wingerter Laboratories, Inc. These cores were taken on Feb. 10, 2000. Evercrete Deep Penetrating Sealer was applied at the rate of 55 square feet per gallon Dec. 12, 1999. The results of these tests show increase in compressive strength at the 60 day mark ranging from 60% to 90%.

The developer, insurance company, and engineers are extremely pleased with these results as this home was considered for demolition if the compressive strength could not be increased to an acceptable level.

Thank you very much for your guidance on this project.

Sincerely,

Vincent Antonelli

Sales and Technical Representative
